

Ideation Phase

Brainstorm & Idea Prioritization Template

Project name	ai-enhanced intrusion detection system
--------------	--

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to brainstorm
3-4 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do before going.

10 minutes

1. Team gathering
Define who, how, and when you will meet and what you need to get started (location, or go-to tools).
2. Set the goal
How about the problem you'll be focusing on solving in the brainstorming session?
3. Learn how to use the Brainstorm deck
Ask the Facilitator. Experience the fun & happy with our tool.

Open with...

Define your problem statement

What problems are you trying to solve? Frame your problems as a How Might We statement. This will be the focus of your brainstorm.

10 minutes

Key rules of Brainstorming

To see successful and productive sessions:

- 1. Stay on topic
- 2. No criticism or ideas
- 3. Defers judgement
- 4. Listen to others
- 5. No too many
- 6. If good idea, let it go

Step-2: Brainstorm, Idea Listing and Grouping

1. Brainstorm

Show down any ideas that come to mind that address your problem statement.

40 minutes

Tip: You can brainstorm ideas and then cluster them into categories to see which are most relevant to your problem.

2. Group Ideas

Take turns sharing your ideas while clustering similar or related ideas as you go. Once all sticky notes have been grouped, give each cluster a sentence that says: "If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups."

20 minutes

Tip: The group that has the most ideas wins. The group that has the most ideas wins. The group that has the most ideas wins.

Team 1

1. Deep Learning with Autoencoders for Anomaly Detection

2. Time-Series Analysis with LSTM (Long Short-Term Memory) Networks

3. Unsupervised Learning using Clustering Algorithms (e.g., DBSCAN, Isolation Forest)

Team 2

Data Collection and Preprocessing Team

2. Model Development Team

3. Evaluation and Testing Team

4. Deployment Team

Step-3: Idea Prioritization

3. Prioritize

Show teams which of the ideas that were generated in the previous step are most important to implement. Place your ideas on the grid to determine which ideas are important and which are less so.

20-30 minutes

Tip: You can use the grid to prioritize ideas based on their importance and feasibility. The ideas that are most important and feasible are the ones that should be implemented first.

4. After you collaborate

You can expect that you will be able to find a solution to your problem. You can expect that you will be able to find a solution to your problem. You can expect that you will be able to find a solution to your problem.

10 minutes

Tip: You can use the grid to prioritize ideas based on their importance and feasibility. The ideas that are most important and feasible are the ones that should be implemented first.

Importance vs. Feasibility

Importance: The more important the idea is, the higher it is on the grid. Feasibility: The more feasible the idea is, the further to the right it is on the grid.

Deployment and Dashboard

Data Preprocessing and Feature Engineering

Autoencoder-Based Detection

LSTM Time-Series Model

Unsupervised Clustering (e.g., DBSCAN, Isolation Forest)

Key: Important Feasible

1. **Important Feasible** (High Importance, High Feasibility)

2. **Important Not Feasible** (High Importance, Low Feasibility)

3. **Not Important Feasible** (Low Importance, High Feasibility)

4. **Not Important Not Feasible** (Low Importance, Low Feasibility)
